40.002 GOVERNMENT PUBLICATIONS-SALES AND DISTRIBUTION

(The Government Bookstore)

FEDERAL AGENCY: GOVERNMENT PRINTING OFFICE

AUTHORIZATION: 44 U.S.C. Chapter 17.

OBJECTIVES: To make U.S. Government publications available for purchase.

TYPES OF ASSISTANCE: Sale, Exchange, or Donation of Property and Goods; Dissemination of Technical Information.

USES AND USE RESTRICTIONS: The Superintendent of Documents, Government Printing Office, is an authorized sales agent for publications resulting from study and research conducted by the various departments and agencies of the Federal Government. More than 24,000 titles covering nearly every field of interest are available for purchase at nominal prices. If purchasers order 100 copies or more of one publication to be mailed to a single address, they will receive a 25 percent discount. Bookdealers, regardless of the quantity purchased, will be allowed a 25 percent discount when the publications, pamphlets, periodicals or subscription services are mailed, delivered, or forwarded to the dealer's normal place of business. No discounts are allowed when the publication, pamphlet, periodical, or subscription service is mailed to a third party (unless in quantities of 100 or more), or on those periodicals and subscription services which fall into a special pricing category as noted in price list No. 36, "Government Periodicals and Subscription Services" which is described below. Generally speaking, there are no restrictions on reprinting or quoting from U.S. Government Publications, as the code of laws of the United States provides that they cannot be copyrighted. However, Government publications occasionally contain copyrighted material which was used with permission of the copyright owner, and publication in a Government document does not authorize any use or appropriation of such copyright material without the consent of the owner. Since the Government Printing Office serves merely as a printing and distribution agency for Government publications and has no jurisdiction over their content or subject matter, it is suggested that the originating department or agency or its successor be consulted prior to reprinting or quoting from any given publication. In those instances in which permission to reprint material from Government publications is granted, customary credit should be given to the Government Department which prepared the material. By law, every publication printed through the GPO, whether it is designated for sale or not, must be cataloged and indexed. The "Monthly Catalog," which is produced to fulfill this obligation, lists all publications printed and is available to the public on a subscription basis. The Superintendent of Documents distributes approximately 428 Federal publications, which are of a nature to be supplemented or revised regularly, and periodicals. These subscription items are listed in the Superintendent of Documents price list no. 36, "Government Periodicals and Subscription Services," which is revised quarterly and includes order blanks for obtaining these items.

PROGRAM ACCOMPLISHMENTS: The NASA Technology Transfer Program has helped many industrial, educational, and governmental organizations develop new products, increase productivity, and reduce costs. Typically, the Technology Transfer Program provides user access to aerospace technology in support of technical problem-solving. For example, the Skylab heat pipe system, being adapted and applied to a thermal control system on the Alaskan Pipeline, will help maintain structural integrity and control the environment by preventing uncontrolled freezing and thawing of the permafrost. A new model from a major automobile manufacturer has been developed with the help of the NASTRAN computer program, one of 1,500 programs available from COSMIC, the Technology Transfer Division's software center. Domestic firms purchased 356 programs and related documentation for $436,000, contributing to the nation's industrial productivity. During the past year, more than 50,000 individuals and firms were given access to new product and process ideas and improvements from NASA resulting in new research and development by subscribing to Tech Briefs. Over 7,000 technical innovations from the space program have been published and are now available for use by American industry. In the area of remote sensing, satellite data have been used by State and local governments to provide planning and evaluation data to satisfy requirements of Federal legislation (e.g., EPA 208 Areawide Planning and Waste Treatment, HUD 701 Comprehensive Planning Assistance Program, Coastal Zone Management Act) as well as State and regional requirements for baseline inventory, planning and change information in the areas of land use, environmental management, water resources, forestry, agricultural monitoring, and critical area management. Since 1977, over 1,000 personnel have received detailed training in the use of remote sensing and establishment of operational remote sensing programs in a number of states has been assisted through cooperative efforts with State agencies.

45.111 PROMOTION OF THE HUMANITIES—HIGHER EDUCATION/REGIONAL AND NATIONAL GRANTS

FEDERAL AGENCY: NATIONAL ENDOWMENT FOR THE HUMANITIES, NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

AUTHORIZATION: National Foundation on the Arts and Humanities Act of 1965; Public Law 89-209 as amended; 20 U.S.C. 951 et seq.

OBJECTIVES: To promote the development and testing of imaginative approaches to education in the humanities by supporting projects that can be completed within a specified period of time. Most projects are planned and implemented by small groups of faculty, last one or two years, and are concerned with the design of model humanities programs intended for wide-spread use, the development of curriculum materials, and increased collaboration among educational and other cultural institutions. Projects also encourage excellence in teaching and promote serious attention to the central issues in the humanities by bringing groups of college faculty into residence at institutes for periods ranging from four to eight weeks or, in exceptional circumstances, longer for joint curriculum planning.

TYPES OF ASSISTANCE: Project Grants.

USES AND USE RESTRICTIONS: Grant funds may be used to develop teaching materials, to plan, conduct, and evaluate curricular reform, and to hold institutes to improve the teaching of the humanities. Funds are not available for construction costs, library acquisitions, production costs of books or journals, nor for non-essential permanent equipment.

ELIGIBILITY REQUIREMENTS:

Applicant Eligibility: Two-year and four-year public and private colleges, universities, and nonprofit educational organizations. For Humanities Institutes, public and private two-year and four-year colleges, universities and professional and educational associations with demonstrated faculty interest and expertise in the subject and appropriate library facilities. State and local governments are ineligible.

Beneficiary Eligibility: Same as Applicant Eligibility for Regional and National Grants. For Institutes, participating faculty and their home institutions.

Credentials/Documentation: Certification of tax-exempt status may be required. For entities of State and local government, costs will be determined in accordance with FMC 74-4. For educational institutions, costs will determined in accordance with OMB Circular No. A-21.

APPLICATION AND AWARD PROCESS:

Preapplication Coordination: Informal inquiry with Headquarters Office, followed by submission of preliminary draft, is urged. OMB Circular No. A-102 applies for this program.

Application Procedure: Submission to Headquarters Office of a proposal accompanied by an application form (NEH-4). This program is subject to the provisions of OMB Circular No. A-110.

Award Procedure: Applications are reviewed by panels of scholars and outside readers. Awards are made by the Chairman of the National Endowment for the Humanities after recommendation by the National Council on the Humanities. Notification of awards must be made to the designated State Central Information Reception Agency in accordance with Treasury Circular 1082.

Deadlines: January 2 and July 1.

Range of Approval/Disapproval Time: From five to seven months.

Appeals: Not applicable.

Renewals: Applications for renewal must compete against new applications.

ASSISTANCE CONSIDERATIONS:

Formula and Matching Requirements: Cost sharing is generally required. The Endowment will contribute no more than 90 percent of the costs. In large grants, cost-sharing greater than 10 percent is preferred. For Institutes, beneficiary institutions are required to join the cost sharing.

Length and Time Phasing of Assistance: From less than a year up to three years. Funds must be expended during the grant period. For Institutes, up to two consecutive summers. Funds are released as required.

POST ASSISTANCE REQUIREMENTS:

Reports: Progress reports are required at least annually but no more frequently than quarterly. Reports on project expenditures are required quarterly. Final progress and expenditures reports are due within 90 days after completion or termination of project support by NEH.

Audits: Final audits may be made at the direction of the Chairman of the Endowment for up to three years after the grant period.

Records: Any and all records and journals required for audit under generally accepted accounting systems must be retained for up to three years from the date of submission of the final expenditures report.

FINANCIAL INFORMATION:

Account Identification: 59-0200-0-1-503.

Obligations: (Grants) FY 79 $4,939,000; FY 80 $5,000,000; and FY 81 est $5,500,000.

Range and Average of Financial Assistance: $5,000 to $250,000. Average: $100,000.

PROGRAM ACCOMPLISHMENTS: In FY 1979, 113 applications were received and 59 were made. Approximately 1,600 institutions over fiscal years 1977, 1978, and 1979 were aided (18 percent of the program's target universe). At least 1,900 people have directly drawn benefit from Higher Edcuation/Regional and National funds through student use of materials, faculty development programs, etc. It is not possible to determine accurately the number of students directly aided through programs of Higher Education/Regional and National grants, because the numbers vary widely from project to project. For example, a project to prepare ten manuals in advanced Chinese languages for graduate students in East Asian Studies may directly benefit only 150 students per year, but those students represent the nation's future generation of Chinese scholars and diplomats. In the other extreme, one anthropological film study of a rural Greek village has been seen by at least 50,000 students in this country over the past three years and has been broadcast by German television. Humanities Institutes alone directly affect the classroom instruction of 65,000 students. Exemplary grants of this program must be viewed against the national background. In an era of declining undergraduate enrollments, higher education has had to take cognizance of changing clientele. Add to this scarcer financial resources and the glut of Ph.D.'s, the national scene has not been a happy one. The Higher Education/Regional and National program has sought to refresh faculty members from all kinds of institutional settings, especially those from small private colleges, community colleges, and colleges and universities which have not traditionally taught humanities courses. It has made grants for programs which allow faculty to update their knowledge of recent developments within their own academic fields (new social history), which educate faculty in disciplines that are allied to their own fields--especially in areas in which connections with other disciplines have not traditionally been made (engineering and architecture), and programs which extend the humanities to new institutions and invite participation by new groups (law enforcement trainers' institute).

Headquarters Office: Blanche Premo, Assistant Director, Higher Education Projects, Education Programs, National Endowment for the Humanities, MS 202, Washington, DC 20506. Telephone: (202) 724-0311.

RELATED PROGRAMS: 13.454, Higher Education-Strengthening Developing Institutions; 45.138, Promotion of the Humanities - Education Pilot Grants; 45.139, Promotion of the Humanities - Education Implementation Grants.

EXAMPLES OF FUNDED PROJECTS: 1) A Committee for Education in Business Ethics developed curriculum materials and tested them at several universities from coast to coast. Case studies on issues such as whistle-blowing, conflict of interest, and ethical theory, and guidelines for teaching courses in business ethics, were prepared and advertised. Faculty from 100 different institutions requested the materials. 2) Institutes were designed to help faculty members bridge the common gap between the Greeks and Middle Ages in the teaching of Western Civilization. Forty faculty members from as many institutions attended these institutes, learning about the rabbinic period. They also devised courses and curriculum materials on Near Eastern Law, prophetic ethics, and Hellenistic philosophy. 3) Several educational films were developed. Three examples from recent grants are the following: a) "Medicine and the Physician in Western Civilization -- 17th and 18th Centuries," for use in university courses on the history of medicine, b) a film of a medieval music-drama performed in its original location in the Abbaye St. Benoit de Fleury in central France for use in medieval studies courses, c) "Saints and Spirits," about religious experience in Islam. 4) A mid-western university offered the services of its museum complex to the entire region. Through a workshop-seminar faculty were introduced to the museum's collections and techniques of teaching with objects.

CRITERIA FOR SELECTING PROPOSALS: Higher Education Projects grants support the development and testing of imaginative approaches to humanities education for activites that address significant regional or national need. The following are questions which reviewers are asked to consider in rating and evaluating proposals: - How exemplary is the project? USES AND USE RESTRICTIONS: Grants offered through the Consultant Grant program enable colleges and universities to receive expert assistance in the evaluation of existing humanities curricula and in the development of new programs or approaches. Consultants are selected from among outstanding directors and reviewers of curriculum development projects funded by NEH. All funds are used for expenses directly related to the consultancy; consultant honoraria, per diem and travel, and related secretarial and communication costs. The assistance provided by a consultant must be substantive; consultants are prohibited from assisting in the preparation of grant proposals to this or any other agency. No expenses not directly related to the consultancy, such as faculty salaries, equipment, indirect costs, student assistance, and so forth, may be received through this program.

ELIGIBILITY REQUIREMENTS:

Applicant Eligibility: Public and private two-year and four-year colleges, universities, technical and professional schools. State- and locally-controlled institutions of higher education are eligible to apply. An institution may work under only one Consultant Grant at a time.

Available from Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Headquarters Office: Stephen Goodell, Challenge Grant Program, MS 800, National Endowment for the Humanities, Washington, DC 20506. Telephone: (202) 724-0267.

RELATED PROGRAMS: None.

EXAMPLES OF FUNDED PROJECTS: (1) An historical society in Illinois is using its Challenge Grant to establish a development office to broaden its membership base in community support as well as business, corporate and foundation support. The society is also utilizing the grant to partially amortize the accumulated liabilities in its pension and endowment funds. (2) A college in Vermont is using its grant support to provide new strengths in the college's humanities disciplines, particularly in the expansion of Language, English Literature, and History programs and the creation of new endowments. New sources of giving from alumni, friends, foundations and corporations have added to the college's traditional pool of supporters to provide continuing support. (3) A state museum was awarded a grant to raise monies for the development of a museum association. The recently established museum on Tennessee history and culture will now be able to hire a public relations director and provide for needed equipment and storage facilities. (4) An historical library and museum in Delaware received a grant for capital improvements, including new storage facilities for archival research collections and energy conservation measures. Funds will also be used for special self-help and outreach programs, including the increase and consolidation of new sources of financial support, the completion of an operational efficiency study and the expansion of various humanities programs.

CRITERIA FOR SELECTING PROPOSALS: Besides meeting the eligibility requirements applications are weighed in four basic areas: (1) Need - Financial need demonstrated in the application. The financial profile makes the case for Challenge Grant support. The institution has carefully assessed its needs against the likely impact an award would make. (2) Financial Goals - It appears that the Challenge Grant will help the institution improve its financial situation over the long run, or achieve financial stability. The extent to which a grant will enable the institution to build a better long-term base of support for its programs and services in the humanities. Expenditures do bear a reasonable relation to the institution's present and long-term needs in the humanities. There is a clear relationship between expenditures and humanities programs and resources. There is a reasonable relationship between the grant request and the institution's total budget and operating costs. (3) Program Goals - It appears that a Challenge Grant will significantly strengthen or improve the institution's resources and services in the humanities. An award (or absence of one) will make a great difference in the institution's long-term plans. (4) Fundraising Plan - The proposed fundraising plan must be sound. The fundraising goal must be in reasonable proportion to the past fundraising levels and succcesses. The fundraising plan promises to actually broaden and extend sources of support.

Regional or Local Office: Fellowship Office, National Research Council, 2101 Constitution Ave., N.W., Washington, DC 20814.

Headquarters Office: Dr. Douglas Chapin, Staff Associate, Division of Scientific Personnel Improvement, National Science Foundation, 1800 G Street, N.W., Washington, DC 20550. Telephone: (202) 282-7754.

RELATED PROGRAMS: 47.038, Science and Society Program; 47.048, Science Education Development and Research and Resources Improvement.

EXAMPLES OF FUNDED PROJECTS: In an effort to aid in the conduct of future projects at the local level and motivate and assist young women to prepare for careers in science, a roster of approximately 1,300 women scientists was prepared, containing the names of women who are interested in visiting junior and senior high schools to encourage women to consider science careers. A visiting scientist program for physically handicapped students has been initiated by a grantee university, in which handicapped scientists are visiting rural and small town schools and meeting with handicapped students, their counselors, teachers and parents. In addition to providing role models, the scientists explain how they work, and how one becomes a scientist, and describe career prospects. Highly talented students from high schools having deficient science programs participated in a summer program which acquainted students with the analysis of such societal problems in the forefront of chemical research as water pollution, the photochemistry of smog, and photosythesis. To aid the student in gaining an understanding of how living organisms respond to stresses and genetic abnormalities, seven undergraduate students carried out research on population dynamics, animal behavior, hibernation, pysiology, and genetics. The studies also give the participants first-hand research experience. A series of three Saturday workshops were held for middle school and secondary school mathematics and science teachers. The topics were (1) Mathematical Explorations for Gifted Students; (2) Make It and Take It With You Workshops; and (3) The Use of Microcomputers in the Classroom.

CRITERIA FOR SELECTING PROPOSALS: Decisions are based primarily on the scientific and educational merit of the described activities and conformance with the objectives of the program. In the case of proposals of substantially equal merit, program and geographic balance are additional decision criteria.

Support of science programming on radio has been increased. A notable example is a new series of nightly radio vignettes about astronomy which is being aired by 306 radio stations. An additional 26 stations are carrying it in Spanish. A major airline includes it as part of its in-flight program, reaching another estimated 1.5 million listeners. A project will undertake to analyze information on language planning and language-oriented educational policy intended to enhance language renewal and bilingual education programs for American Indian Tribes in a specific area; conduct training sessions in bilingual literary (orthographical revision, pedagogical grammars) and language awareness workshops and seminars at seven locations; and disseminate this information and the decisions of American Indian educators widely. Support of workshops for citizens of peat regions to help them identify their particular concerns about the formulation of a state policy governing peatlands use as it is seen as a source of energy. RELATED PROGRAMS: 13.454, Higher Education Strengthening Developing Institutions; 47.009, Scientific Personnel Improvement.

EXAMPLES OF FUNDED PROJECTS: A project focuses on a two-semester course sequence in software engineering in response to student and industry demands in an area of the country where high tecnology prevails. The first course will provide a senior Computer Science major with experience in the guided development of a proposal for a medium sized software system. The second course will provide the student with experience on a software development project team. As part of staff efforts to better understand the needs of the colleges and universities it serves and thus to establish a firm basis for designing a program, a university conducted a three-day seminar in which faculty from area institutions provided program managers with first-hand information on institutional science education needs and requirements. One project is assisting a university in establishing a modern plant cell biology teaching laboratory which will be equipped with specialized microscopes and a spectrophotometer to allow students to learn those new techniques of cell study that form the basis of research in agricultural productivity. A project is supporting a physicist who is developing a set of undergraduate instructional units particularly aimed at minority and other students who need help in the study of science and mathematics. The approach emphasizes both concept learning and reasoning skills. A political science course has been developed at a university to teach high school juniors and seniors the principles of political processes that operate at all levels of government. A new text was published in November 1978 and has already been adopted voluntarily at the State level in nine states with indications for further adoptions. In many places, the course is replacing one in use since 1913.

CRITERIA FOR SELECTING PROPOSALS: Decisions are based primarily on the scientific and educational merits of the described activities and conformance with the objectives of the programs. In the case of proposals of substantially equal merit, program and geographic balance are additional decision criteria.

47.054 INDUSTRY/UNIVERSITY COOPERATIVE RESEARCH

NATIONAL SCIENCE FOUNDATION

AUTHORIZATION: National Science Foundation Act of 1950, as amended (42 U.S.C. 1861-1975, P.L. 81-507); Reorganization Plan No. 1 of 1977, as amended (5 U.S.C. App., 1977 Supp. I); and miscellaneous other laws codified at 42 U.S.C. 1876-1884.

OBJECTIVES: To encourage more effective communication and cooperation between researchers in universities and researchers in industry in order to strengthen the ties between these two segements of the Nation's scientific and technological efforts. Grants are made for support of cooperative research projects involving both universities and industrial firms. Proposals must be prepared jointly by academic and industrial researchers and must be submitted jointly by their respective organizations. The proposed research should focus on fundamental scientific or engineering questions of a basic or applied nature and should be such that it may be expected to make a long-term contribution toward product and/or process innovation or to provide knowledge as a foundation for new or improved technologies. Technological development and clinical research are not supported.

TYPES OF ASSISTANCE: Project Grants.

USES AND USE RESTRICTIONS: Grants may be used to pay costs necessary to conduct cooperative research between universities and industrial firms, including such items as salaries and wages, permanent equipment, expendable equipment and supplies, travel, publication costs, and other direct costs.

ELIGIBILITY REQUIREMENTS:

Applicant Eligibility: Universities and colleges and established profit-making industrial firms, including small businesses, are eligible. The cooperating institutions must represent bona fide independent operations, as evidenced by absence of interlocking relationships. Collaboration should involve active participation by scientific or technical personnel at both the university and the industrial organization in aspects of the proposed research.

Beneficiary Eligibility: Same as Applicant Eligibility

Credentials/Documentation: Proposals must be signed by the university and industry co-principal investigators, and by an official of the university and of the industry authorized to commit the university and the industrial firm, respectively, in business and financial affairs.

APPLICATION AND AWARD PROCESS:

Preapplication Coordination: None.

Application Procedure: By submission of a formal proposal describing the research or study to be undertaken. Guidelines are contained in publications, "Grants for Scientific Research" (NSF 78-41), Industry/University Cooperative Research Grants (NSF 80-13), and "Guide to Programs". Proposals should be directed to the NSF program that supports research in the proposed field or subfield, but identified on the cover page as an industry-university cooperative proposal. This program is subject to the provisions of OMB Circular No. A-110.

Award Procedure: NSF staff members review and evaluate all proposals, generally with the assistance and advice of other qualified scientists and other appropriate persons who are specialists in the field covered by the proposal. Proposals are accepted in order of merit to the extent permitted by available funds. Notification of award must be made to the designated State Central Information Reception Agency in accordance with Treasury Circular 1082.

Deadlines: None

Range of Approval/Disapproval Time: Normally, five to nine months.

Appeals: The principal investigator may request, in writing, that the Foundation reconsider its action in declining any proposal application, renewal application, or continuing application.

Renewals: Grants are made for specific periods and, ordinarily, are not renewed. A project showing significant progress may be the basis for a subsequent proposal for further research. Such follow-on proposals are competitively reviewed as new proposals.

ASSISTANCE CONSIDERATIONS:

Formula and Matching Requirements: All awards are subject to cost sharing by both the university and the industrial participant. Universities will cost share on their portion of the project costs in accordance with standard NSF policy. This may be accomplished by a contribution to any cost element, direct or indirect. Industrial organizations will cost share on their portion of the project costs. Small business organizations are required to contribute at least 10 percent of costs of their participation. Organizations with significant research and development budgets are expected to pay 100 percent of their own participation costs.

Length and Time Phasing of Assistance: Awards are normally of two or three years duration.

POST ASSISTANCE REQUIREMENTS:

Reports: A technical report must be submitted to the National Science Foundation at the conclusion of the project. Results of successful research are normally expected to be published in the open scientific literature.

Audits: Federal audits will be made in accordance with the policies of OMB Circular No. A-73 to ensure that funds have been applied efficiently, economically, and effectively. Period audits should be made as part of the recipient's systems of financial management and internal control to meet terms and conditions of grants and other agreements.

Records: Grantees are expected to maintain separate records for each grant to insure that funds are used for the general purpose for which the grant was made. Records are subject to inspection during the life of the grant and for three years thereafter.

EXAMPLES OF FUNDED PROJECTS: (1) Rural Alaska Community Action Program; Anchorage, Alaska, serves all of Alaska, with the exception of the City of Anchorage. Its successful operation of weatherization programs has literally meant the difference between life and death for low-income residents of the State. Recent accomplishments include convincing the State legislature to establish a $1.5 million revolving loan fund, administered by the CAA, to meet costs for the transportation of heating oil to isolated areas and successfully advocation for a medical screening program to prevent inner ear infections in Alaskan pre-schoolers. The CAA is the social service delivery mechanism for many state programs, since there are so few local governments capable of delivering them. (2) Community Action Planning Council of Jefferson County; Watertown, New York, works closely with town and county officials, and was instrumental in obtaining funds from the Department of Transportation to set up a bus system that brought public transportation to five rural townships. Previously, the CAA had spearheaded the establishment of a children"s clinic, serving young patients from four counties in New York's Northern Tier. In addition to its CSA funding, this community action agency has been able to mobilize more than $1 million from other Federal and State sources to alleviate poverty in its service area. (3) West Central Missouri Rural Development Corporation, Appleton, Missouri, serves a 9-county rural area with such problems as lack of industry, absence of public transportation, high unemployment, and the migration of youth into the metropolitan area. The agency helps communities run sheltered workshops, community centers, adult basic education programs, a retired senior volunteer program and a credit union. This CAA has been active in mobilizing resources for low-rent housing for senior citizens. Of the approximately $57 million mobilized in the whole region, this agency was responsible for $19.5 million. Last year this CAA placed more than 500 people in permanent jobs; provided family planning assistance to almost 900; and for the elderly, served almost 38,000 hot meals, provided home visits for more than 14,000 and medical screening for almost 6,000. (4) Fresno County Economic Opportunity Commission, Inc., in California has been a pioneer in energy conservation. They have become a major source for training other CAAs in home repair-insulation in Region IX and were instrumental in the establishment of a Weatherization Training Center in Stockton. This center was the direct result of EOC's persuading the Pacific Gas and Electric Company – the major utility company in California – to take on responsibility for such training. The company expects to spend $1 million in the next five years to develop the most professional weatherization training center in the country. The enterprising CAA, again using private sector involvement, also operates a Halfway House for runaways and a bakery which trains low-income and ex-offender youth. (5) Northeast Michigan Community Services Agency, Inc. (NEMSCA), serving a sparsely populated rural area in northeastern Michigan has developed innovative programs and mobilized substantial non-CAS resources with $194,000 in local initiative funds. Types of activities include: (a) it brought over $10 million in community development funds into the area, (b) it functions as the transportation authority for northeastern Michigan and is developing a comprehensive transportation system for the area (c) it has organized Youth Services Bureaus for the counties it serves to deal with problems of runaways and delinquent youth (d) as the Agency on Aging for northeastern Michigan, it administers Older Americans Act funds in the area, providing 16,000 senior citizens with a variety of services, including 150,000 meals per year (e) it operates a multi-county Head Start program serving 1130 children (f) it directly administers programs totalling five million dollars, and (g) it is currently exploring the use of alternate fuel sources such as ethanol and compost heaps. (6) Gleams Human Resources Commission, Greenwood, South Carolina, serves a six-county rural area facing a lack of public transportation, poor housing and poor educational systems. CSA funds amount to $530,000; the agency mobilizes $4 million in other public, private and federal funds. It operates a variety of programs: manpower, nutrition, child care, and a training program in health education for staff that work with the nutrition and child care program. The CAA provides integrated services including Housing Counseling, CETA, Summer Recreation, Head Start, Energy, Manpower, Consumer Counseling, in community centers in each county. (7) Tri-County Community Council, located in a rural area in Bonifay, Florida, received $156,000 CSA funds. This CAA generated 3.3 million dollars to operate a variety of programs including: Head Start, Congregate Meals for Elderly, Manpower, Summer Youth, Housing Rehabilitation, CAA Trust Fund, DOE/Energy and HUD Section 8.

CRITERIA FOR SELECTING PROPOSALS: Applicants are Community Action Agencies which have been recognized as such by the Community Service Administration and are in compliance with CSA administrative regulations. Applicants from jurisdictions not currently served by a Community Action Agency should contact the appropriate CSA Regional Office for information.

Projects which improve the ability of low-income people to produce and purchase foodstuffs in a manner that fosters self-sufficiency. 3) Nutrition & Consumer Education. Projects which seek to improve the ability of low-income people to understand the connection between diet and health, to obtain at the lowest prices nutritionally superior foods and to prepare and preserve those foods in ways that minimize the loss of nutrients. 4) Crisis Relief. FINANCIAL INFORMATION:

Account Identification: 81-0500-0-1-999.

Obligations: (Grants and contracts) FY 79 $28,645,000; FY 80 est $28,000,000; and FY 81 est $26,000,000.

Range and Average of Financial Assistance: $5,000 to $300,000. Average $42,000.

PROGRAM ACCOMPLISHMENTS: This program has witnessed a significant shift in emphasis over the past two years from direct service delivery to catalytic and advocacy activities and increased cooperation between community action agencies and other anti-hunger groups at the local level, and between CSA and USDA at the national level. CFNP grantees have been responsible for or contributed significantly to: 1) a substantial increase in enrollments in the Food Stamp Program, the School Breakfast and School Lunch programs, the Day Care Feeding Program, WIC Program and Summer Feeding Program; 2) increased and expanded feeding programs for the elderly, such as congregate feeding programs, meals on wheels, and home-delivered meals for the sick and disabled; 3) significantly increased participation by the poor in the review of and comment on legislative and regulatory changes that affect the funding, policy and administration of various Federal feeding programs, thus making it easier for the poor to participate in such programs; 4) improved outreach mechanisms and more efficient enrollment procedures in various federally-funded food programs at the state and local levels; 5) the establishment of numerous family and community gardens and provision of assistance to low-income families in the production, preparation and preservation of foodstuffs; 6) a reduction in food prices to a considerable number of low-income families by enabling them to make food purchases through co-ops and buying clubs established with CFNP funds; and 7) the delivery of foodstuffs and food vouchers, on an emergency basis, to a significant number of low-income persons in need of such assistance. A survey of two regions indicated that in fiscal year 1978, 127 new projects or activities were undertaken in the Access category which involved 247,000 new participants who received some $19 million in benefits. Approximately 125 new projects were undertaken in the Self-Help category involving 50,000 new participants who received benefits valued at more than $5 million. More than 50 projects or activities were undertaken in Nutrition and Consumer Education serving some 67,000 new beneficiaries. (No dollar value could be placed on the benefit.) Under Crisis Relief some 360 new activities were undertaken which served 390,000 new participants with an estimated dollar value benefit of $25 million. The total CSA investment in these two regions was $2,423,000 and the cost benefit ratio was approximately 10 to 1. It should be noted that the above represents only 10 percent of the total CSA investment at the regional level. While complete statistics on the Nation as a whole are not available at this time, it is believed that the above accomplishments are typical of those in other parts of the country.

CAAs will make application for funding in the amount of that target planning figure in accordance with the application procedures established herein. Where funds permit, CSA Regional Directors shall have discretionary authority to provide funds to serve the recreational needs of economically disadvantaged children in areas not covered by a CAA where there is a clearly demonstrated need for such services and a viable delivery system exists through which to provide the services. SECURITIES AND EXCHANGE COMMISSION

58.001 SECURITIES—INVESTIGATION OF COMPLAINTS AND SEC INFORMATION

(Complaints and Inquiries)

FEDERAL AGENCY: SECURITIES AND EXCHANGE COMMISSION

AUTHORIZATION: Securities Act of 1933; Public Law 73-22; 15 U.S.C. 77a et seq; 17 CFR 230, Securities Exchange Act of 1934; Public Law 73-291; 15 U.S.C. 78a to 73jj; 17 CFR 240, as amended by Public Law 92-29; and 94-29; Public Utility Holding Company Act of 1935; Public Law 74-333; 15 U.S.C. 79 to 79z-6; 17 CFR 250. Trust Indenture Act of 1939; Public Law 76-253; 15 U.S.C. 77aaa to 77 bbbb; 17 CFR 260. Investment Company Act of 1940; Public Law 76-768; 15 U.S.C. 80a-1 to 80a-52; 17 CFR 270. Investment Advisers Act of 1940; Public Law 76-768; 15 U.S.C. 80b-1 to 80b-21; 17 CFR 275. Chapter X, National Bankruptcy Act; Public Law 75-696; 11 U.S.C. 501-676; 17 CFR 281; Securities Investor Protection Act of 1970, Public Law 91-598; 15 U.S.C. 78aaa; 17 CFR 240-206d-1 et seq, as amended by Public Law 95-283.

OBJECTIVES: To represent investors in their dealings with the securities industry by processing complaints received from individual investors and insuring that registered entities process such complaints. To increase public knowledge of the functions of the S.E.C. To advise the Commission and staff about problems frequently encountered by investors and possible solutions. To represent the interests of individual investors in connection with Commission rule-making proceedings.

TYPES OF ASSISTANCE: Dissemination of Technical Information; Investigation of Complaints.

USES AND USE RESTRICTIONS: Investor complaints are an important source of information about possible securities laws violations and assist the Commission in its law enforcement and regulatory functions. Persons who believe they have been defrauded in their securities transactions should advise the Commission so that it may take appropriate action. The public is cautioned, however, that the Commission is not a collection agency; nor does it advise investors whether particular transactions about which they may have complained are violative of the Federal securities laws or seek recovery in their behalf, through court action or otherwise. However, such laws do provide important remedies to investors who may have been defrauded, and investors should consider seeking the advice of an attorney as to any recourse available to them if they believe they have been defrauded.

ELIGIBILITY REQUIREMENTS:

Applicant Eligibility: Anyone may seek information from or file a complaint with the Securities and Exchange Commission.

Beneficiary Eligibility: The Commission's actions are designed to protect not only those who seek its help directly, but all other similarly situated investors as well as the general public. Moreover, the Commission's public files contain financial and other information about several thousand companies, broker-dealers, investment companies, investment advisers, transfer agents, and banks. Any member of the public may examine such material at the Commission's headquarters office in Washington, DC, and its regional offices in New York, Chicago and Los Angeles, or he or she may obtain copies of the material by writing to the headquarters office (c/o Public Reference Section). Also, investors who believe they have been defrauded, or believe that another party has violated the Federal securities laws are urged to present their complaint and/or information to the Commission for use in its enforcement and regulatory activities. Since a public action taken by the Commission does not necessarily result in any monetary benefits to investors, an aggrieved investor may find the information disclosed by the Commission in its actions helpful in any private action he or she may bring to recover his or her losses.

OBJECTIVES: To enable states to coordinate and manage environmental approaches to their pollution control activities. Consolidated grants are alternate grant delivery mechanisms. These mechanisms provide for consolidation into one grant instrument those grants awarded separately to states for management of environmental protection activities including but not limited to air pollution control, water pollution control, and solid waste management.

TYPES OF ASSISTANCE: Project Grants (Cooperative Agreements).

USES AND USE RESTRICTIONS: Grant funds may be used for costs specifically incurred in the conduct of a project in accordance with the purposes enumerated in the approved application. Deviations to normal EPA grant administration regulations, procedures, financial and progress reporting procedures, and other nonstatutory requirements may be granted only by the Director, Grants Administration Division. Any approved deviation must conform to 40 CFR 30, Subchapter B,"Grants," and to Part 23, "Deviations" of the Grants Administration Manual to the greatest extent practicable. JOINT FUNDING: This program is considered suitable for joint funding with closely related Federal financial assistance programs in accordance with the provisions of OMB Circular No. A-111. For programs that are not identified as suitable for joint funding, the applicant may consult the headquarters or field office of the appropriate funding agency for further information on statutory or other restrictions involved.

ELIGIBILITY REQUIREMENTS:

Applicant Eligibility: Any State designated entity eligible to receive and administer funds made available through the applicable statutory authorizations. Such an applicant is eligible even though it may not be currently receiving funds under one of the grant authorities. This program is available to each State, territory and possession of the U.S., including the District of Columbia.

Beneficiary Eligibility: Same as Applicant Eligibility.

Credentials/Documentation: States and EPA Regional Offices together have flexibility in developing the format of the application as long as funding sources are indicated, and the State presents an interdisciplinary approach to its pollution problems. States are encouraged to describe all of their environmental protection activities. The application should include quantified State objectives. If possible, the State should include critical path/strategy charts of its pollution control decision-making efforts. The applicant's program should complement the applicable EPA Regional Office program operating guidance. Information contained in the application should not duplicate information already provided or to be provided by the State to satisfy other EPA requirements (such as air implementation plan documentation). Governors (or their designated Plan review agencies) must be given an opportunity to review the State plan pursuant to Part III, Attachment A of OMB Circular No. A-95 (Revised). Costs will be determined in accordance with FMC 74-4 for State and local governments.

APPLICATION AND AWARD PROCESS:

Preapplication Coordination: Preapplication communications should be directed to the appropriate EPA Regional Administrator. An environmental impact assessment is required for this program. The standard application forms as furnished by the Federal agency and required by OMB Circular No. A-102 must be used for this program. Applications are subject to State and areawide clearinghouse review pursuant to procedures in Part I, Attachment A of OMB Circular No. A-95 (Revised). During the preapplication phase, the Office of Audit will review the applicant's accounting system for its adequacy to administer the consolidated grant.

Application Procedure: The application should be submitted to the appropriate EPA Regional Office.

Award Procedure: Notification of awards must be made to the designated State Central Information Reception Agency in accordance with Treasury Circular 1082.

After each meeting, the regional office will prepare an evaluation report and submit a copy to the State. Both State and EPA performance should be evaluated at the meetings. The final quarterly report should be an annual report. The State will not be required to submit written progress reports during the course of the grant cycle. The State must be provided with the evaluation format early enough to be prepared for the scheduled evaluation conferences. The State will not be required to submit regular written reports during the course of the grant project. Written reports may be required intermittently during the project for the purpose of more effective grantee/EPA coordination and direction. Such reporting requirements must minimize demands on grantee resources.

EXAMPLES OF FUNDED PROJECTS: AGNET -- The Commission is instrumental in extension of a revolutionary farm management program throughout the Region, and soon perhaps into many other agricultural States covered by Title V Commissions. AGNET, a computer-based system contains nearly 150 decision models permitting farmers and ranchers to make informed management judgments on all phases of their operations. Thousands of Old West farmers and ranchers now consult the computer for guidance on feeding, marketing, irrigating, budgeting, planting and all their other operations. SOIL SURVEYS -- In cooperation with the U.S. Soil Conservation Service, the Commission is accelerating the pace of soil surveys throughout the Old West, reducing by approximately five years the long lead time anticipated before all areas of the region will have been subjected to accurate surveys. SCRUBBER WASTE GYPSUM -Another successful demonstration project by the Commission is its adaptation of scrubber waste gypsum as a soil amendment for sodic soils. Field-tested, the process of using the gypsum is now being adapted by agricultural experts throughout the country. ASPEN CHIPS -- A similar demonstration may lead to commercial development of ground aspen trees as a livestock feed. Parts of the Old West are plagued with aspen saplings which inhibit healthy forestation. The demonstration, which sought to make cleaning out of the aspens a commercially feasible project, proved that cattle thrive on aspen supplements in their regular feeding rations. Further studies developed the cost and marketability of the process. ERIS -- In an effort to provide order and eliminate duplication in western energy research and development, the Commission conducts an Energy Research Information System, a computer-based locater system which includes all known energy-related R & D carried on in western States by public and private organizations.

CRITERIA FOR SELECTING PROPOSALS: Primarily two criteria--regional applicability and a direct contribution to the Region's economic development. As demands for Commission assistance have become more prevalent, it has become necessary to establish a schedule of priorities for worthwhile projects so that many projects which would appear to be meritorious and needed are still rejected by the Commission because they do not rate highly enough on its schedule or because they do not make enough of a direct impact upon economic development. Cost is increasingly a factor because of funding limitations. Prospective costs are scrutinized carefully by advisory committees and Commission staff coordinators and approval of projects is often conditioned upon ability of the proposer to reduce his costs and to increase his own contribution. Contractor or grantee personnel are equally important and do have a significant impact upon Commission acceptance of various proposals. Other criteria include a uniqueness of approach to a problem so long as the problem is directly related to the ability of the Commission to improve the overall economic development of the Region.
